Genes Dev. 2:1424-1438(1988).

-!- FUNCTION: Sequence-specific transcription factor which is part of a developmental regulatory system that provides cells with a developmental regulatory system that provides cells with specific positional identities on the anterior-posterior axis.
-!- SUBCELLULAR LOCATION: Nuclear.
-!- SIMILARITY: Belongs to the Antp homeobox family. Deformed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

Homeobox protein Hox-84 (Hox-2F) (Hox-2.6).
Name-HOXB4; Synonyms-HOX2F;
Home sapiens (Human).
Bukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
Mammalia; Butheria; Buarchontoglires; Primates; Catarrhini; Hominidae;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             MEDILINE-20538492; PubMed-11085749; DOI-10.1084/jem.192.10.1479; Giannola D.M., Shlomchik W.D., Jegathesan M., Liebowitz D., Azdesen T., Dancis A., Emerson S.G.; Madesch T., Dancis A., Emerson S.G.; Hematopoietic expression of HOXB4 is regulated in normal and leukemic stem cells through transcriptional activation of the HOXB4 promoter by

hormone (GnRH) of the invention. The mimetic peptides comprise the wild type GnRH sequence and a spacer attached to either the N. or C. terminal. The spacer molecules serve as a link through which the immunomimic is attached to an immunological carrier such as diphtheria toxoid (DT) and also affects the immune response generated by the vaccinated mammal against the immunomimic. Compositions comprising these peptides may be used for treating a mammal for gonadotropin and gonadal steroid hormone associated dependent disease or for providing immunological contraception in mammals. They can also be used for treating breast cancer, uterine and other gynaecological cancers, endometriosis, uterine fibroids, prostate cancer, or benign prostatic hypertrophy Human gastrin 17; antigenic peptide; immunisation; treatment; gastro-oesophageal reflux disease; gastric; duodenal; ulceration; cancer; Ser spacer peptide. Immunogenic compsn. for producing anti-human gastrin 17 antibodies - used for treating e.g. gastro-oesophageal reflux disease, gastric and duodenal ulceration or cancer. AAR74295 is the human gastrin 17 (hG17) hG17(1-9)-Ser9 antigenic peptide, it comprises a 9 amino acid hG17 immunominale followed by the Ser spacer peptide AAR74296. The antigenic peptide is used to produce anti-hG17 antibodies (Abs). The Abs can be induced in a patient, or used for antibodies (Abs). The Abs can be induced in a patient, or used for antibodies (Abs) as a patient of diseases in which hG17 is involved, e.g. gastric and duodenal ulceration; gastro-oesophageal reflux disease and cancer Gaps ö 100.0%; Score 45; DB 2; Length 7; 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to an immunogen comprising a peptide from the cholecystokinin (CCK)-B/gastrin-receptor conjugated to an immunogenic cholecystokinin (CCK)-B/gastrin-receptor conjugated to an immunogenic condition caused by gastrin-dependent malignant cell growth that condition caused by gastrin-dependent malignant cell growth that comprises administering to an animal an arti-CCK-B/gastrin-receptor immunogen; (2) for treating a gastrin-dependent tumour that comprises and bind to the CCK-B/gastrin-receptors in the tumour cells; (3) for detecting a gastrin-receptors in the tumour cells; (3) for that comprises exposing an anti-gastrin-receptor antibody to cells; (apolated from a tumour biopsy sample and detecting the CCK-B/gastrin-receptor in the sample; and (4) a method for diagnosing a gastrin-receptor antibodies to a patient possessing a colorectal tumour and imaging the tumour by scintigraphic scanning. The methods can be used for the detection and treatment of tumours such as gastrointestinal, colorectal, stromach, pancreatic and hepatocellular cancers. The present sequence represents a specifically claimed spacer sequence of the immunogen. This sequence is used in order to make the immunogen capable of inducing specific immune responses
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             of a cholecystokinin-gastrin receptor - for producing antibodies for detection and treatment of gastrin-dependent tumours, e.g.

```
CREAD) that comprises administering to a patient an immunogenic composition which generates anti-gastrin antibodies, which bind to gastrin, in a patient; and administering histanine H 2 antagonist or a proton pump inhibitor. The method provides a more effective method for controlling acid output by the stomach. The therapy is less costly. High gastrin levels associated with standard therapies are neutralized and undesirable side effects are reduced. The method permits a reduced dosage of acid reducing agent both at the acid producing level as well as the acid production stimulating level (gastrin). Reduction of dosages is desirable for prolonged treatment of GERD. In a combination therapy with H 2 agonists or proton pump inhibitors, anti-gastrin 17 antibody titers can be maintained by occasional booster shots while gastric acid inhibitor dosing is reduced. Immunization allows a sufficient time for the esophagitis to completely heal and no surgery is required. The present sequence represents a carboxy-terminal spacer used along with a human heptadecagastrin (G17) immunomimic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö

The invention relates to treating a gonadotropin hormone-dependent or gonadal steroid hormone-dependent cancer. The method comprises administering anti-GRRH antibodies which bind and neutralize Gonadotropin Releasing Hormone (GRRH) in vivo. The anti-GRRH immunogenic composition comprises a GRRH immunogenic peptide conjugated through the terminal Cys of the spacer peptide to an immunogenic carrier, preferably diphtheria or tetanus toxoid, with carrier/peptide ratio being in the range of 4.7 to 30.1 peptide molecules per carrier molecule. The method is used to treat oestrogen-dependent cancer, endometricals or prostate, oestrogen-dependent cancer, endometricals or prostatic hypertrophy. The present sequence represents a spacer sequence
                                                                                                                                Administering antibodies or immunogenic compositions against gonadotropin releasing hormone is useful to treat gonadotropin hormone-dependent or gonadal steroid hormone-dependent disorders such as breast and prostate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Combination useful in the treatment of pancreatic cancer or in the prevention of cancer cell metastasis, comprises an anti-gastrin effective immunogenic composition, and at least one chemotherapeutic agent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gastrin; immunogenic; chemotherapeutic; cancer; cytostatic; pancreatic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a combination treatment for pancreatic cancer.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                            This invention describes a novel method for the treatment or preventing hypergastrinemia by administering to a patient a gastrin G17 and/or G34 peptide fragment linked by an amino acid spacer to an immunogenic carrier. The methods are used to treat hypergastrinemic patients, patricularly those with permicious anemia, those receiving treatment with anti-ulcer agents such as proton pump inhibitors (particularly omeprazole or lansoprazole) or H 2 receptor blocking agents or antagonists, or those having colorectal disorders or diseases. This sequence represents a spacer peptide used in the construction of the immunogenic construct
Immunogenic; treatment; hypergastrinemia; gastrin G17; gastrin G34;
pernicious anemia; anti-ulcer; proton pump inhibitor; colorectal disease.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                condition mediated by octaxin comprising generating an active immune response in the subject to ectaxin. Also described: (1) an immunogenic composition (C) comprising ectaxin or its peptide fragment coupled to an immunogenic protein carrier; (2) producing (C); and (3) a pharmaceutical formulation for use as vacche comprising (C); and an adjuvant and a vehicle. (C) has antiasthmatic and antiallergic activities, and can be used in vacches. The method is useful for treating a subject for a condition mediated by ectaxin, e.g. asthma, allergy or allergic disease. The present sequence represents a spacer peptide, which is used in the exemplification of the present invention.
The combination comprises: (a) either an anti-gastrin effective immunogenic composition (A) or an anti-gastrin and/or anti-gastrin receptor effective immunological agent; and (b) at least one chemocharapeutic agent for inhibiting cancer growth. The immunological agent is a monoclonal or polyclonal antibody derived from antisera produced in patients by immunization with (A). The combination is used for the treatment of pancreatic cancer or in the prevention of cancer cell metastasis. The present sequence represents a synthetic peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Treating a subject for a condition mediated by eotaxin, e.g. asthma, allergy or allergic disease by generating an active immune response in the subject to eotaxin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention describes a method for treating a subject for a

The present invention relates to injectable liposomal compositions (1) for delivery of a water-soluble substance e.g. immunominic peptides. (I) comprises several liposomal vesicles comprising a high weight ratio of a lipid to an encapsulated water-soluble substance so as to achieve a high efficiency of encapsulation. The immunominic peptide is chosen from efficiency of encapsulation. The immunominic peptide is chosen from ADH89219, gonadotropin releasing hormone (GRRH) peptide (ADH89217-ADH89229, and human chorionic gonadotropin (hCG) peptide (ADH89221-ADH89224), and human chorionic gonadotropin (hCG) peptide (ADH89221-ADH89222), and human cognate receptors, where the vaccines directed against hormone or hormone cognate receptors, where the vaccines directed against hormone or hormone cognate receptors, where the vaccine comprises at least one: the common ending captide such as gastrin G-17 or G-34 is useful for treating sastrointestinal nalignancy, and non-gastrointestinal tumors such as thyroid and lung cancer; or GnRH or hormonelial as contraceptive and for treating cancers in male and female
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Cytostatic, Contraceptive, Vaccine, immunomimic peptide, gastrin G-17; gastrin G-34; gonadotropin releasing hormone, GnRH; chorionic gonadotropin, hCG; hormone, gastrointestinal malignancy; thyroid cancer; lung cancer; reproductive system cancer.

                                                                                                                                                                                                                                                                                                                                                                                                                                                   This invention relates to a novel method of treating a subject for an inflammatory condition which results from eosinophil accumulation which comprises generating an active immune response in the patient comprising autoantibodies to eotaxin and interleukin [IL]-5 (or IL-4, IL-9 and IL-13). The invention may be useful for the development of compounds with an antiinflammatory, antiasthmatic or antiallergic activity or for the production of a vaccine. The composition and methods are useful for preventing or treating inflammatory conditions resulting from eosinophil accumulation, such as asthma, allergy or allergic diseases. The present sequence is that of a spacer peptide which may be used within the method
                                                                                                                                                                                                                                                                                                                                                                                 Treating inflammatory conditions resulting from eosinophil accumulation (e.g. asthma, allergy or allergic disease) comprises generating an active immune response against eotaxin and interleukin-5.
                                                                                                                  inflammatory condition, eosinophil accumulation, immune response; autoantibody; ectaxin; interleukin; IL-5; IL-4; IL-9; IL-13; antiinflammatory; antiasthmatic; antiallergic; vaccine; asthma; allergy; altergic disease; spacer peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Cytostatic; Contraceptive; Vaccine; immunomimic peptide; gastrin G-17; gastrin G-34; gonadotropin releasing hormone; GnRH;

The present invention relates to injectable liposomal compositions (I) for delivery of a water-soluble substance e.g. immunominic peptides. (I) comprises several liposomal vesicles comprising a high weight ratio of a lipid to an encapsulated water-soluble substance so as to achieve a high efficiency of encapsulation. The immunomimic peptide is chosen from gastrin G-17 (ADH89210 to ADH89213), and ADH89213, gastrin G-13 (ADH89217-ADH89219), gonadotropin releasing hormone (GRRH) peptide (ADH89220 and ADH89222 and ADH89225). (I) comportaing vaccines directed against hormone or compare receptors, where the vaccines directed against hormone or compare receptors, where the vaccine comprises at least one: hormone-immunomimic peptide such as gastrin G-17 or G-34 is useful for treating gastrointestinal malignancy, and non-gastrointestinal tumors useful as contraceptive and for treating contraceptive and for treating contraceptive systems. The present sequence comprises residues 1-6 of G-34 inked to a spacer peptide at the C-terminal end.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  substance e.g. vaccine for preventing pregnancy, comprises several liposomal vesicles comprising a high weight ratio of lipid to encapsulated water-soluble substance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human gastrin 17; antigenic peptide hG17(1-9)-Ser9; immunisation;
treatment; gastro-oesophageal reflux disease; gastric; duodenal;

The invention relates to the treatment of gastroesophageal reflux disease (GERD) that comprises administering to a patient an immunogenic composition which generates anti-gastrin antibodies, which bind to gastrin, in a patient; and administering histamine H 2 antagonist or a proton pump inhibitor. The amethod forvlotes a more effective method for controlling acid output by the stomach. The therapies are neutralized and gastrin levels associated with standard therapies are neutralized and cundesirable side effects are reduced. The method permits a reduced dosage of acid reducing agent both at the acid producing level as well as the caid production stimulating level (gastrin). Reduction of dosages is desirable for prolonged treatment of GERD. In a combination therapy with H 2 agonists or proton pump inhibitors, anti-gastrin 17 antibody titers can be maintained by occasional booster shots while gastric acid inhibitor dosing is reduced. Immunization allows a sufficient time for the sophagitis to completely heal and no surgery is required. The present sequence represents a human heptadecagastrin (G17) immunomimic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Cancer; lung; oesophagus; liver; immunogen; hormone; gastrin 17; G17; gastrin receptor; cholecystokinin-B; CCK-B; Barrett's condition; gastrin-induced tumour; immune response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                      Method for treatment of gastroesophageal reflux disease (GERD)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Peptide specific for the induction of immune response to G17.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                              ımmunogenic compsn. for producing anti-human gastrin 17 antibodies - used
for treating e.g. gastro-oesophageal reflux disease, gastric and duodenal
ulceration or cancer.
                                                                                                                                                                                                                                                                                                                                                                                                      AAR74295 and AAR74297 are human gastrin 17 (hG17) antigenic peptides, used to produce anti-hG17 antibodies (Abs). The Abs can be induced in a patient, or used for passive immunisation, for the treatment of diseases in which hG17 is involved, e.g. gastric and duodenal ulceration; gastroesophageal reflux disease and cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gastroesophageal reflux disease; GERD; gastrin; anti-gastrin antibody;

                                                                                                         The specification describes a method of treating a cancerous or precancerous condition of the lung, oesophagus or liver. The method involves administering to a patient an immunogen which induces annibodies in the patient against peptide hormone gastrin 17 (GIV) and/or a gastrin receptor, e.g. cholecystokinin (CCK)-B. The method is useful for treating cancerous or pre-cancerous condition of lung, oesophagus or liver, where the condition is cancer, or Barrett's condition. The treatment prevents or delays progression of the Barrett's oesophagus to a cancerous state. The method is also useful for treating the growth of a gastrin-induced tumour or pre-cancerous leakon of the lung, liver or oesophagus. ABP73032-35 represent peptides which induce specific immune responses to GI? The peptides comprise an amino terminal fragment of GI7 and a carboxy-terminal spacer

                                                                                                                                              gonadotropin releasing hormone (GnRH). These peptides comprise the wild type GnRH sequence and a spacer attached to either the N- or C- terminal. The spacer molecules serve as a link through which the immunoming is attached to an immunological carrier such as diphtheria toxoid (Dr) and also affects the immuno response generated by the vaccinated mammal against the immunoming. Compositions comprising these peptides may be used for treating a mammal for gonadotropin and gonadal steroid hormone associated dependent disease or for providing immunological contraception in mammals. They can also be used for treating breast cancer, uterine and other gynaecological cancers, endometriosis, uterine fibroids, prostate cancer, or benign prostatic hypertrophy
                                           New anti-gonadotropin releasing hormone immunogenic composition(s) - used for treating gonadotropin and gonadal steroid hormone dependent disease(s) and providing contraception.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gonadotropin releasing hormone; GnRH; leukotoxin; LKT; fusion protein; antibody; immunogenic; chimeric; vaccine; testosterone; androgenic; non-androgenic; steroid; reduction; weight gain; muscle distribution; fat distribution; male pattern; boar taint; flavour; impairment; reliable; immunocastration; meat production.

ö
          analogues which may be used as an alternative to sequence AAYSB135 in embodiants of the present invention. The invention relates to a method of using two GRRH immunogen vaccines to produce uncastrated male animals for meat production, one vaccination prior to or during the fattening period to reduce circulating testosterone levels, and the second vaccination about 2-8 weeks before slaughter to substantially reduce androgenic and/or non-androgenic stroids. The invention is used to produce food animals that exhibit the weight gain and muscle/fat distribution of male animals without the problems associated with male animals. Such problems include "boar taint", a urine-like dour found in cooked meat of uncastrated pigs which is caused by steroids stored in the tissues, and similar flavour impairments in the meat of other intact male animals. The invention is more reliable than prior art immunocastration
gonadotropin releasing hormone (GnRH)
                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Improved method for immunization gives increased antibody titers and reduced irritation by using separate administration of a sustained-release immunogen and adjuvant.

```

The present invention describes a method for immunisation comprising . separate administration of an immunogenic sustained-release composition and an immune response enhancing composition. Also described are: (i) an immunisation kit for increasing the immune response to a vaccine target comportaing separate sustained release preparations of an immunogenic composition and an immune response stimulating composition; and (ii) an improved composition for parenteral immunisation composition separately a sustained release immunogenic composition and an immune response

The method comprises administering anti-GnRH antibodies which bind and neutralize Gonadotropin Releasing Hormone (GnRH) in vivo. The anti-GnRH immunogenic composition comprises a GnRH immunogenic peptide conjugated through the terminal Cys of the spacer peptide to an immunogenic carrier, preferably diphtheria or
enhancing composition. The method is useful for improving the immune response to an immunogen by eliciting a significant anti-immunogen antibody titre increase. The method is effective in enhancing a high antibody titre allowing a reduction in the amount of the immunomimicking portion of the immunogen and may reduce local irritation at the site of incoulation. The separate administration allows the relative doses to be adjusted to produce the optimum response. The present sequence represents an immunomimic which is given in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Administering antibodies or immunogenic compositions against gonadotropin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  GnRH, gonadotropin hormone; gonadal steroid hormone; cytostatic; cancer; gonadotropin releasing hormone; endometriosis; prostatic hypertrophy;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        releasing hormone is useful to treat gonadotropin hormone-dependent or gonadal steroid hormone-dependent disorders such as breast and prostate

Also described: (1) an immunogenic composition (C) comprising ectaxin or its peptide fragment coupled to an immunogenic protein carrier; (2) producing (C); and (3) a pharmaceutical formulation for use as a vaccine comprising (C) and an adjuvant and a vehicle. (C) has antisathmatic and antiallergic activities, and can be used in vaccines. The method is useful for treating a subject for a condition mediated by ectaxin, e.g. asthma, allergy or allergy of alsease. The present sequence represents a human ectaxin epitope and spacer amino acid sequence, which is used in the exemplification of the present
tetanus toxoid, with carrier/peptide ratio being in the range of 4.7 to 30.1 peptide molecules per carrier molecule. The method is used to treat GnRH-dependent cancer, particularly of the breast, uterus or prostate, oestrogen-dependent cancer, andometriosis or prostatic hypertrophy. The present sequence represents a GnRH immunogen peptide sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Treating a subject for a condition mediated by eotaxin, e.g. asthma, allergy or allergic disease by generating an active immune response in the subject to eotaxin.
                                                                                                                                                                           Gaps

The present invention describes a method for treating a subject for a condition mediated by cotaxin comprising generating an active immune response in the subject to eotaxin. Also described: (1) an immunogenic composition (C) comprising eotaxin or its peptide fragment coupled to an immunogenic protein carrier; (2) producing (C); and (3) a pharmaceutical formulation for use as a vaccine comprising (C) and an adjuvant and a vehicle. (C) has antiasthmatic and antiallergic activities, and can be used in vaccines. The method is useful for treating a subject for a condition mediated by cotaxin, e.g. asthma, allergy or allergic disease. The present sequence represents a human ectaxin epitope and spacer amino acid sequence, which is used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Treating a subject for a condition mediated by eotaxin, e.g. asthma, allergy or allergic disease by generating an active immune response in
